Recognize → Fix: Quick Start

A practical 30-minute process for finding one source of friction and agreeing the first test. The full Frictionless book is not required to use this guide.

Start with one task, not an entire organization.

- **Minute 0–5 / Notice:** Write what the person wants to achieve, what they actually do, and the moment they hesitate, repeat work, or give up. Do not guess their motives.
- **Minute 5–15 / Map and measure:** Draw the steps, including staff or system handoffs. Count avoidable actions, time, repeat contacts, or errors. Note where the evidence comes from.
- **Minute 15–25 / Align:** Identify the Product Owner, implementer, person approving time or money, and someone representing affected users. Is the friction protecting anyone?
- **Minute 25–30 / Choose a pilot:** Test one reversible change. Agree a baseline, a success measure, the safeguard that must remain, and a date to review the outcome.

Use these files together

Resource	What it does
Friction Evidence Card	Captures an observed problem and a plausible improvement
Friction Ledger (XLSX)	Quantifies repeated work without treating guesses as facts
Stakeholder Alignment (XLSX)	Clarifies conflicting agendas and decision authority
Improvement Scorecard (XLSX)	Checks outcomes before and after a change

The test of success: Did the person achieve the same goal more easily, without sacrificing understanding, access, recovery or control?

The core guide is also available as readable HTML in the resource hub. Example files are illustrative and never imply independently verified outcomes.
